

Player SDK for Android

Release Notes

Known Issues

- RayV Player SDK for Android cannot currently play subscription channels and channels that cannot be viewed in standalone mode.
- Changing channels on an existing RVVideoView is currently not supported.

June 1, 2011

- Improved test program and SDK to handle sleep, home and back correctly.
- Fixed stream stopping upon orientation change.
- RVVideoView support backdoor options for troubleshooting:
 - Double tap on the progress bar will display current channel playback state.
 - Tapping 5 times quickly on the progress bar will add a P2P Info button on the video. Clicking the button will display transparent P2P information on the video.
- RVVideoView::start() must be called for channel playback to start.
- RVVideoView::setMediaController() can be used to display play/pause button on the video.
- SupportInfoActivity class added for displaying RayV Player information to assist troubleshooting problems.
- SDK now includes its own resource files.
- Programming Guide updated with important information.
